

## Enterprise Edition for Citrix Server

Low Cost and Hardware-Free Anytime, Anywhere Secure Access  
Made Possible by BioPassword and Citrix Presentation Server

Every day you must ensure information availability to customers and employees while protecting data, privacy, and adhering to regulatory requirements. Every day you must guard against both external and internal threats. Fortunately, today is not every day.

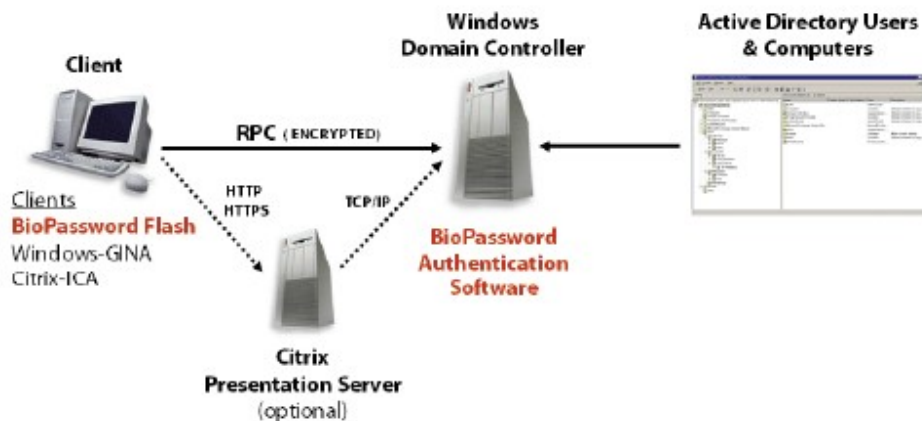

Today, the secure access you have been waiting for is right at your fingertips.

### We Know Your Type!

BioPassword® is a patented software-only solution that uses keystroke dynamics, a security technology based on biometrics, to accurately identify a user by the way he or she types. The combination of a user's typing patterns (what a person does) and the user's password (what a person knows) is two-factor authentication that creates a "hardened" password. Layering this hardened password on your existing security framework effectively shields your entire network from unauthorized internal and external access.

### The BioPassword Advantage

As a software-only solution that is proven effective, BioPassword is the perfect choice for supplementing the anytime, anywhere access that MetaFrame® Presentation Server software provides to enterprise applications. Seamless integration with MetaFrame Presentation Server software for Windows® 2003 and 2000 networks, Secure Gateway, and Web Interface, makes BioPassword a low cost, easy-to-use and easy-to-deploy security solution.

### Key Benefits

- Seamless integration with Citrix® Presentation Server.
- Two-factor authentication of remote and mobile users across the Web.
- No hardware-related costs: buying, shipping, installing, tracking, monitoring, training users, maintaining, managing, or replacing hardware devices.
- IT staff are already familiar with the standard Microsoft® technologies, Active Directory and the Microsoft Management Console that

BioPassword uses.

- Easy installation, rapid deployment, simple management.
- A minimal failure-to-enroll rate as anybody who can type can enroll and be authenticated.
- Viewable activity logs that help with troubleshooting, create audit trails, and facilitate regulatory compliance.
